

SAI HAE NAING LAY

Computer Engineer

Chiang Rai, Thailand | 0655298515 | haenainglay20@gmail.com | github.com/AnitaMaxWynn901

SUMMARY

Computer Engineering Fresh Graduate based in Thailand with hands-on experience building full-stack systems, computer vision pipelines, and AI-powered automation tools. Enjoys turning real-world data into practical, tested solutions, with particular interest in AI/ML and computer vision.

TECHNICAL SKILLS

Programming: C# (Basic), Java, Python

Web / Mobile: HTML, CSS, JavaScript, Node.js, Express, Flutter

AI / ML: YOLO, OpenCV, Mediapipe

Database: MySQL, Supabase, MongoDB

APIs / Tools: REST APIs, LINE Messaging API, LINE LIFF, VS Code, Git

Soft Skills: Teamwork, Time Management, Quick Learner, Adaptability

Languages: Burmese (Native), English (Fluent), Thai (Basic), German (A1)

EXPERIENCE

CAS Cogniser (Thailand) — Chiang Mai, Thailand

Internship Trainee

LINE Bot Sushi Cafe System — Node.js, Express, LINE LIFF, Supabase

Jan – Apr 2026

- Developed a full-stack ordering system with LINE Messaging API integration; implemented role-based dashboards (customer / shop master / admin) with authentication
- Built an order management system with real-time updates and a points-rewards feature

Voice-Activated Digital Signage Control System — Python, Flask

Jun – Jul 2025

- Built a voice-controlled ad display with real-time play / stop / switch functionality and continuous listening with auto-demo fallback
- Created dynamic ad-category mapping with automatic video file detection

Smart Retail Analytics System — YOLO, OpenCV, Face Recognition, NumPy

Jun – Jul 2025

- Built a retail analytics system combining people counting, face recognition, and heat-map generation, with real-time entry / exit tracking in defined zones
- Built a live dashboard with video stream, occupancy metrics, entry / exit logs, and heat-map overlays

PROJECTS

Behavior Recognition for Estrus Monitoring in Cattle

Senior Final Project — Computer Vision, YOLOv8/v11, Python, Roboflow

- Built a computer vision pipeline (dataset construction, Roboflow annotation, YOLO training, evaluation on real farm CCTV footage) to classify cow behaviors and support automated estrus detection

Human Action Recognition System

Team Project — Image Processing, Python, Mediapipe

- Built a human action recognition system using classical image processing — enhancement, segmentation, edge detection, geometric transforms — covering preprocessing through classification

EDUCATION

Mae Fah Luang University

Aug 2022 – July 2026

Bachelor of Engineering in Computer Engineering — Expected Graduation: February 2027 — Status: Fresh Graduate
